RAGHAD AL-DAWSARI

Data Analyst | Power BI · SQL · Python · Chemistry Background

Saudi Arabia | +966 55 304 8827 | raghadalmitrk@gmail.com | linkedin.com/in/raghad-aldawsari | raghadaldawsari.github.io/portfolio

PROFESSIONAL SUMMARY

Data Analyst with hands-on project experience turning raw data into decision-ready insight using Power BI, DAX, SQL, Python, and Excel. Cleans, validates, and analyzes large datasets, then builds interactive dashboards and KPI reports across renewable energy, electricity, sustainability, and emergency-operations domains. Holds a B.Sc. in Chemistry, which adds a rigorous, accuracy-first approach to data quality. Seeking to support data-driven decision-making in the energy sector, in line with Saudi Vision 2030.

TECHNICAL SKILLS

Data & Analytics: Power BI · DAX · Power Query · SQL (MySQL) · Python (Pandas, NumPy, Matplotlib) · Excel
Processes: Data Preparation & ETL Basics · Data Cleaning & Validation · Dashboard Development · KPI Tracking · Trend Analysis · Reporting
Quality & Compliance: ISO 9001:2015 QMS Awareness · HSE Industrial Safety · Technical Documentation
Soft Skills: Analytical Thinking · Problem Solving · Data Storytelling · Attention to Detail

ANALYTICS PROJECTS

Saudi Renewable Energy Pipeline vs. 2030 Target | Power BI · DAX 2026

- Analyzed Saudi renewable projects by status (operating, contracted, tendered) using the GASTAT April 2026 renewable energy bulletin; built an interactive Power BI dashboard with a switchable 100 / 130 GW scenario and DAX-based KPIs.
- Found registered capacity of 63.8 GW (49.1% of the 130 GW scenario), of which only 12.3 GW (9.5%) is operating; the required pace at the 130 GW scenario (2026–2030) is 23.54 GW/year, about 4.1x the best year achieved so far (5.76 GW in 2025).
- Mapped projects by technology (solar/wind), region, developer, capacity, and expected commissioning year.

Saudi Electricity Consumption Analysis (2005–2025) | Power BI · Power Query 2026

- Cleaned and analyzed national electricity consumption data (KAPSARC Data Portal) by region and sector; built an interactive dashboard with Year, Region, and Sector filters and KPI cards (total consumption, CAGR, YoY growth).
- Found consumption grew from ~153M MWh in 2005 to 358M+ MWh in 2025 (4.3% CAGR), including a 3.5% decline in 2019 and 8.8% growth in 2025.
- Showed the residential sector leads total consumption, while the Eastern Region stands out for industrial demand.

Saudi Weather & Environmental Insights | MySQL · Power Query · Power BI 2025

- Cleaned and analyzed multi-year Saudi weather data (2022–2025) for seasonal and climate trends; developed a Weather Comfort Index (WCI) and interactive Power BI dashboards.

Saudi Red Crescent Emergency Operations Dashboard | Power BI 2026

- Processed 201,000+ records; validated data accuracy and built regional KPI dashboards highlighting 125,377 critical cases for operational monitoring.
- Flagged anomalies and trends across datasets to ensure reporting integrity and timely decision-making.

IKEA Environmental Sustainability Dashboard | Power BI · Python · Excel 2026

- Consolidated multi-year data (FY20–FY23) across Retail, Production, and Logistics; built KPI dashboards tracking CO2 reduction and renewable energy growth, including a 22% CO2 reduction vs. the FY16 baseline.

PROFESSIONAL EXPERIENCE

Freelance Data Analyst | Self-employed, Saudi Arabia Jun 2025 – Present

- Analyze data from multiple sources (public datasets, Excel/CSV files, and SQL databases) across energy, sustainability, weather, emergency-services, and sales domains.
- Clean, validate, and model data using SQL, Power Query, and Python; build interactive Power BI and Excel dashboards with KPIs, trends, and clear insights; document sources and methodology.

Field Trainee | Armed Forces Hospital Laboratory, Wadi Ad-Dawasir Jun 2021 – Aug 2021

- Assisted with specimen handling, labeling, and documentation while maintaining data accuracy.
- Supported laboratory testing, equipment preparation, and quality control procedures under supervision, following HSE and documentation regulations.

EDUCATION

B.Sc. in Chemistry | Prince Sattam Bin Abdulaziz University 2018 – 2022

- GPA: 4.57 / 5.00, Second Class Honors | Research: nanomaterial-based heavy metal removal from aqueous systems.

CERTIFICATIONS

- Google Data Analytics Professional Certificate (2026)
- Python Programming Essentials, Rice University (2025)
- ISO 9001:2015 Quality Management Systems Awareness Training, 15 hrs, Al-Khabir Higher Institute (2024)
- Industrial Occupational Health & Safety (HSE), Public Health Academy (2024)
